

"Empowering Industries with High-Quality Zinc Oxide"

LEADING THE WAY IN
ZINC OXIDE
MANUFACTURING

Anvith Industry, located in Metoda GIDC, Rajkot, is a forward looking manufacturer specializing in high quality zinc oxide. With a strong foundation in non ferrous metallurgy, we have recently expanded our capabilities by commissioning a modern electrical zinc oxide plant, enabling cleaner, energy efficient, and consistent production of ZnO across various grades.

Our advanced facility is designed to serve the specific needs of industries such as rubber, ceramics, paints, plastics, cosmetics, pharmaceuticals, and agriculture. The adoption of electrical furnace technology not only enhances purity and performance but also aligns with our commitment to sustainability and precision manufacturing.

Driven by innovation, strict quality control, and customer satisfaction, Anvith Industry aims to be a reliable partner for businesses seeking superior zinc oxide solutions across India and beyond.

About Us

Anvith Industries, our story began with small manufacturing unit in Rajkot, Gujarat, with a clear vision to create high quality Zinc Oxide and build a brand that industries around the world can rely on.

What started as a modest setup has grown into a trusted name in Zinc Oxide manufacturing. Over the years, we've combined technical knowledge, modern processes, and a deep commitment to quality to serve our customers better, every single day.

Today, our Zinc Oxide products are used in rubber, ceramics, pharmaceuticals, paints, and agriculture and reach customers in many countries across six continents. Whether you're a local business or a global brand, we're here to deliver consistent quality, timely support, and a partnership you can count on.

Our VISION

"To be a center of excellence in Zinc Oxide manufacturing through advanced chemical engineering, process innovation, and quality standardization, serving critical industries with precision grade materials."

Our Mission

To produce high purity Zinc Oxide using controlled particle morphology, phase stability, and consistent physicochemical properties.

To implement stringent quality control systems for traceability, reproducibility, and zerodefekt assurance.

To collaborate with technical institutes, research centers, and laboratories to improve product application in rubber compounding, ceramics, pharmaceuticals, and agrochemicals.

To continuously train our technical staff in analytical chemistry, material science, and safety standards to maintain scientific excellence on the shop floor.

Anvith Industry, we specialize in producing high purity zinc oxide with purity levels reaching 99.5% to 99.9%, tailored to meet the strict demands of high performance industries. Our advanced electrical zinc oxide plant ensures a controlled production environment that minimizes contamination and guarantees consistent particle size, brightness, and chemical composition.

Manufacturing of Zinc Oxide in following catagoreies:
